About me

AI engineer focused on agentic AI systems and LLM-based multi-agent evaluation. Research background in deep-learning anomaly detection for time-series data (ECG, cyber-physical systems). Published at EMNLP 2025 (Oral) and ACL 2026; co-author on two granted Republic of Korea patents.

Skill

Agentic AI★5.5 Multi-Agent LLM★5
GNN★4.5 Anomaly Detection★5

(*)[The skill scale is from 0 (Fundamental Awareness) to 6 (Expert).]

about

AI Engineer at Suresoft Technologies' Intelligent Agent Technology Team. Master's in Computer Engineering at Kwangwoon University. Visiting research at LG Electronics Canada with the University of Toronto.

education

- 2024-2026

M.S. in Computer Engineering
GPA 4.33 / 4.5 (98.1%). Bio-Computing & Machine Learning Laboratory.

Kwangwoon University, Seoul
- 2025

Graduate Research Program
Mechanical and Industrial Engineering. GPA 3.68 / 4.0.

University of Toronto, Canada
- 2019-2024

B.S. in Electronics and Communications Engineering
GPA 3.41 / 4.5 (88.1%).

Kwangwoon University, Seoul

experience

- 2025-Now

AI Engineer, Intelligent Agent Technology Team
Developing an AI validation system using agentic AI architectures for enterprise model verification. Designing autonomous and collaborative agents that verify and evaluate ML models at scale.

Suresoft Technologies, Seongnam
- 2021-2025

Research Assistant
Deep-learning anomaly detection in time-series (ECG, cyber-physical systems). Co-developed an Active Kill-Switch and Biomarker-Based Defense System for IoT medical devices.

Bio-Computing & ML Lab, Kwangwoon U.
- 2025

Visiting Researcher
Built an LLM-driven assessment framework for evaluating performance of agentic AI systems.

LG Electronics Canada (with U. of Toronto)
- 2022

AI Development Project, Summer Program
Personality-based drug-addiction prediction system. Recognized with the program's Achievement Award.

Qualcomm Institute, UC San Diego

publications

- 2026

D. Kwon[†] et al. "CascadeDebate: Multi-Agent Deliberation for Cost-Aware LLM Cascades." ACL 2026 — Industry (Poster).
- 2025

D. Kwon[†] et al. "GEMMAS: Graph-based Evaluation Metrics for Multi-Agent Systems." EMNLP 2025 — Industry (Oral).
- 2025

D. Kwon et al. "Graph-Enhanced Bi-GRU for Anomaly Detection in Power Generation Environments." DMKD (Springer Nature, under review).
- 2024

D. Kwon et al. "Hybrid GAT + Transformer for implantable-device anomaly detection." IBEC 2024 — Best Poster Silver.

awards

- 2025

Silver Award, 23rd Embedded Software Competition (KIISE).
- 2025

Outstanding Student Paper, IEIE Conference.
- 2024

Best Poster Silver, IBEC 2024.
- 2022

Achievement Award, Qualcomm Institute AI Project — UC San Diego.
- 2021

Gold (Ministerial), Smart Maritime Logistics Project — Minister of Oceans and Fisheries.

patents

- Apr 2026

KR 10-2961984 — Real-time anomaly detection for implantable medical devices.
- Aug 2025

KR 10-2848814 — GPT API-Based Network Anomaly Detection.
