AI Engineer, Intelligent Agent Technology Team

Suresoft Technologies, Seongnam, Gyeonggi, Korea

Main activities: Developing an AI validation system utilizing AI agent-based architectures for enterprise model verification. Designing autonomous and collaborative AI agents that verify and evaluate machine-learning models at scale. Building agentic AI systems to enable systematic, scalable, and reliable AI verification processes.

Research Assistant

Bio-Computing & ML Lab, Kwangwoon University, Seoul, Korea

Main activities: Researched deep-learning algorithms for anomaly detection in time-series data (ECG, cyber-physical systems). Co-developed an Active Kill-Switch and Biomarker-Based Defense System for life-threatening IoT medical devices. Published in EMNLP 2025 (Oral) and ACL 2026; co-author on two granted Republic of Korea patents.

Visiting Researcher

LG Electronics Canada, Toronto, ON, Canada

Main activities: Built an LLM-driven assessment framework for evaluating performance of agentic AI systems. Work fed directly into peer-reviewed publications at EMNLP 2025 and ACL 2026.

AI Development Project Participant, Summer Program

Qualcomm Institute, UC San Diego, San Diego, CA, USA

Main activities: Built a personality-based drug-addiction prediction system using machine-learning models. Recognized with the program's Achievement Award.
